Error Handling:

Error handling in Express is done using middleware.
The error handling middleware (error-handling functions) **MUST have four arguments** instead of three – **err, req, res, next**.
For example, to send a response on any error, we can use

```
app.use(function(err, req, res, next) {
    console.error(err.stack);
    res.status(500).send('Something broke!');
});
```

Explicit error creation:

```
app.get('/', function(req, res){
  if(error_condition){
     //Create an error and pass it to the next function
     var err = new Error("Something went wrong");
     next(err); //first error handling middlewer
  }
  else {
     res.send("everything fine");
     next();
  }
});
```
